

So, here's a little index to your favorite bouldering book. The guide is setup like this: The first column is alphabetic by title, then grade, star rating and page #s. The second column is organized by v-rating. Anything without a v-rating, like Maple Canyon, is not in the guide since it's already organized pretty good. Some climbs have the same name, rating and are at the same area. Those climbs are listed with all the pages they fall on. Some projects have been sent since original publication and the making of this index. All information is as it is in the guide book. If it was misspelled in the guide it is even misspelled here.
